

Moisture Measurement in Ceramics & Powder

Moisture content in ceramic powder mix becomes a crucial point in production to achieve both quality and consistency. Ceramic powder can easily become either too wet or dry, wasting manufacturer's time and money as well as impacting the quality of the product.

MoistTech utilizes near-infrared (NIR) technology that allows for a non-contact solution to provide accurate moisture content readings. Insensitive to material variations such as particle size, material height & color, the sensors provide a continuous, reliable reading with zero drift and no maintenance. There is a one-time calibration with a non-drift optical design allowing operational personnel to make immediate line adjustments based on real-time measurements.

Immediate results can be seen from reduced transportation costs from excess moisture, savings in water usage from dust suppression and cleanup, less wear and tear on equipment due to ash and dust buildup, and preventing blockages on the conveyor resulting in shut downs. Moisture measurement and control in ceramic powder can create a proactive avoidance of quality control issues. Typical accuracy is +/-0.1% moisture, typical analog range is 5-15%.

INSTALL

The on-line sensors can be installed into any hopper, silo, material line, belt or screw conveyor and the moisture results are displayed onto an external display or PC.

Installing a moisture measurement and control system prevents bad product due to undesirable moisture levels. Fine tuning the setup and process of the manufacturing line allows for instant improvements both in the product and in the efficiency in which it is produced.

IMMEDIATE BENEFITS:

- Improved Product Quality
- Lower Waste & Energy Costs
- Process Optimization
- Increased Plant Efficiency
- Dryer Control
- Reduced Downtime

An ideal moisture control system accurately detects the moisture levels at different stages of the process, is easily maintained and has the ability to withstand even the harshest of manufacturing conditions. The IR-3000 series of sensors manufactured by MoistTech are specifically designed to be unaffected by ambient light or material variations to be able to provide continuous, repeatable, accurate readings to improve the manufacturing line and product.

“The addition of the MoistTech IR3000 has provided me with the ability to control our process by instantly increasing or decreasing material flow into the dryer. Prior to the MoistTech technology proved to be a guessing game and time consuming!”
