

Moisture Measurement in Salt

Being extremely sensitive to moisture content, salt processing requires constant monitoring for moisture measurement and control to ensure the drying process optimizes production for best quality and savings in energy.

MoistTech utilizes near-infrared (NIR) technology that allows for a non-contact solution to provide accurate moisture content readings. Insensitive to material variations such as particle size, material height & color, the sensors provide a continuous, reliable reading with zero drift and no maintenance. There is a one-time calibration with a non-drift optical design allowing operational personnel to make immediate line adjustments based on real-time measurements.

Using NIR moisture measurement, salt manufacturers can meet the process control needs while increasing their profitability and shelf life, conserving energy and implementing plant efficiency. Continuous monitoring allows for more precise dryer control and allows the production process to operate smoothly with minimum energy requirements as well as prevent over drying and product waste.

MoistTech offers both online and laboratory sensors to accurately and efficiently provide moisture level readings in seconds. Both options use the same state-of-the-art technology, providing accuracy levels within +/-0.1%.

INSTALL

The on-line sensors can be installed into any hopper, silo, material line, belt or screw conveyor and the moisture results are displayed onto an external display or PC.

Installing a moisture measurement and control system prevents bad product due to undesirable moisture levels. Fine tuning the setup and process of the manufacturing line allows for instant improvements both in the product and in the efficiency in which it is produced.

IMMEDIATE BENEFITS:

- Improved Product Quality
- Lower Waste & Energy Costs
- Process Optimization
- Increased Plant Efficiency
- Dryer Control
- Reduced Downtime

An ideal moisture control system accurately detects the moisture levels at different stages of the process, is easily maintained and has the ability to withstand even the harshest of manufacturing conditions. The IR-3000 series of sensors manufactured by MoistTech are specifically designed to be unaffected by ambient light or material variations to be able to provide continuous, repeatable, accurate readings to improve the manufacturing line and product.

“The addition of the MoistTech IR3000 has provided me with the ability to control our process by instantly increasing or decreasing material flow into the dryer. Prior to the MoistTech technology proved to be a guessing game and time consuming!”
