

Moisture Measurement in Sand

Sand processing can have its difficulties when it comes to moisture measurement and control; too much causes clumping and inconsistencies while too little creates excess dust and out-of-spec product, all of which puts a strain on cost, energy and wasted product.

MoistTech utilizes near-infrared (NIR) technology that allows for a non-contact solution to provide accurate moisture content readings. Insensitive to material variations such as particle size, material height & color, the sensors provide a continuous, reliable reading with zero drift and no maintenance. There is a one-time calibration with a non-drift optical design allowing operational personnel to make immediate line adjustments based on real-time measurements.

MoistTech's technology can rapidly control the drying system resulting in quality spec sand without wasting time, energy and money. Our quality sensors are designed for simple plug-and-play operation and increases the efficiency of your dryer immediately. Moisture content consistency ensure the dryer performs at an optimal level.

Moisture content of the sand entering the dryer varies constantly and typical stockpiles can vary from 2-8% moisture, resulting in heating inadequacies wasting energy, money and out of spec sand.

INSTALL

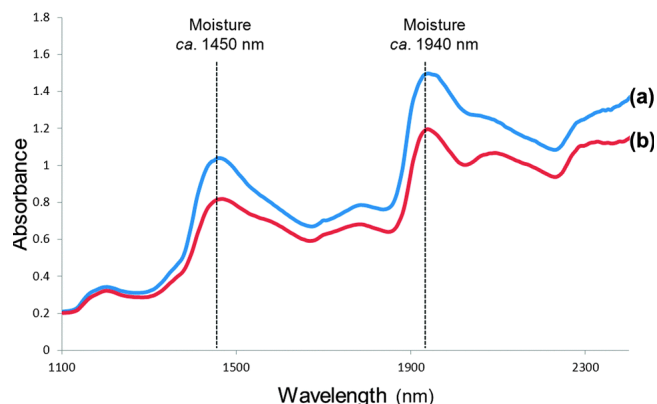

The on-line sensors can be installed into any hopper, silo, material line, belt or screw conveyor and the moisture results are displayed onto an external display or PC.

Installing a moisture measurement and control system prevents bad product due to undesirable moisture levels. Fine tuning the setup and process of the manufacturing line allows for instant improvements both in the product and in the efficiency in which it is produced.

IMMEDIATE BENEFITS:

- Improved Product Quality
- Lower Waste & Energy Costs
- Process Optimization
- Increased Plant Efficiency
- Dryer Control
- Reduced Downtime

An ideal moisture control system accurately detects the moisture levels at different stages of the process, is easily maintained and has the ability to withstand even the harshest of manufacturing conditions. The IR-3000 series of sensors manufactured by MoistTech are specifically designed to be unaffected by ambient light or material variations to be able to provide continuous, repeatable, accurate readings to improve the manufacturing line and product.

“The addition of the MoistTech IR3000 has provided me with the ability to control our process by instantly increasing or decreasing material flow into the dryer. Prior to the MoistTech technology proved to be a guessing game and time consuming!”
